LUNG CANCER SCREENING PROGRAM

WHY SCREEN

Lung cancer is the number one cause of cancer deaths in the world. Each year, more people in the U.S. will die of lung cancer than colon, breast, and prostate cancers combined. **The chance that a man will develop lung cancer in his lifetime is about 1 in 15, for women 1 in 17.**

Estimated U.S. Cancer Deaths 2021

Source: American Cancer Society, Surveillance Research, 2021

WHO SHOULD BE SCREENED

Adults ages **50 – 80 years old**

Current smokers or those who have quit within the last 15 years

History of smoking 20 “pack years” (Example: 2 packs/day for 10 years or 1 pack/day for 20 years)

CT SCANS

Lung CT screening uses low-dose computed tomography (LDCT) to detect lung cancer often before symptoms appear. It is a specialized form of X-ray providing cross-sectional images and greater detail.

TO SCHEDULE AN APPOINTMENT

Our navigator will help you determine your eligibility and schedule your lung cancer screening. Most insurance providers, including Medicare, cover lung CT screenings. Capital Health also offers low cost self-pay screenings.

To schedule a lung screening or for additional information, call 1.844.303.LUNG (5864).

LUNG NODULE CLINIC

Lung nodules are abnormal spots commonly discovered incidentally on imaging studies. While most nodules are benign, some may be cancerous. If a nodule is found, our collaborative team of expert specialists will evaluate and provide treatment for you:

- Interventional Pulmonology
- Pathology
- Thoracic Surgery
- Interventional Radiology
- Medical Oncology
- Radiation Oncology

CANCER CENTER

Our Cancer Center meets the highest standards in advanced, comprehensive cancer care. It is comprised of an extraordinary team of physicians and medical specialists trained in the most complex cancer treatments. Accredited by the American College of Surgeons' Commission on Cancer, we offer:

- A team of experts to evaluate imaging and patients weekly
- Individualized patient treatment plans
- Surgical, medical, and radiation therapy
- Cutting edge imaging and radiation technology
- Clinical trials and research

PULMONARY REHABILITATION

For patients with chronic diseases like COPD, interstitial lung disease, pulmonary hypertension, or after lung surgery, our goal is to improve quality of life by decreasing respiratory symptoms and complications. We assist in developing self-management and control over daily functioning, improving physical conditioning and exercise performance, promoting emotional well-being, and reducing hospitalizations.

SMOKING CESSATION PROGRAM

Experts help you to address the physical and psychological dependence on nicotine and tobacco products. Our approach is personalized to each person's unique needs and includes nicotine replacement therapy, individual/group counseling, and alternative treatment options.
